#### **DETAILED ACTION**

## Claim Rejections - 35 USC § 112

- 1. The following is a quotation of the second paragraph of 35 U.S.C. 112:
  - a. The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.
- 2. Claims 5 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention:
  - a) Claim 5, line 1: "one from the group of' should be -- selected from the group consisting of --;
  - b) Claim 6, lines 1-2: "one material from the group" should -- a material selected from the group consisting of --;
  - c) Claim 7, line 1: "one from the group of' should be -- selected from the group consisting of --; and
  - d) Claim 7 recites the limitation "the surfactant" in line 1. There is insufficient antecedent basis for this limitation in the claim.
- 3. Note that dependent claims will have the deficiencies of base and intervening claims.

Art Unit: 1753

#### **Drawings**

4. The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, the slot forming a terminal end hook which gathers analyte (Claim 9) must be shown or the feature canceled from the claims. No new matter should be entered.

Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Art Unit: 1753

### Allowable Subject Matter

5. Claims 1-4 and 8-10 are allowed.

6. Claims 5-7 would be allowable if rewritten to overcome the rejections under

35 U.S.C. 112, 2nd paragraph, set forth in this Office action and to include all of the limitations

of the base claim and any intervening claims.

7. The following is a statement of reasons for the indication of allowable subject matter:

a) Claim 1 requires (a) a screen having a porosity between 10% and 40% to control

analyte flow and volume in the slot, and (b) the open-topped slot of the dielectric layer

and the open-topped slot of the cover layer to be open to the terminal end of the electrode

support.

The embodiment shown in Figure 3 of Bhullar et al. (US 6,627,057 B1)

("Bhullar") does not comprise a screen for controlling sample flow and volume, but an

agglomeration of microspheres. See col. 2:51-65; the abstract; and col. 1:51-57. It would

not have been obvious to one with ordinary skill in the art at the time of the invention to

substitute a screen having a porosity of between 10% and 40% for the microspheres

because Bhullar specifically requires that the microspheres be discrete particles: "The

microspheres are not physically attached to each other, and therefor do not include

Art Unit: 1753

fabrics, fleeces, nor two or three-dimensional networks or honeycomb structures. Rather, once sample is present, each microsphere is physically unattached." See col. 3:24-38.

In Hughes et al. '823 neither the slot in the cover layer nor the slot in the dielectric layer is open to the terminal end of the electrode support. See Figure 1. It would not have been obvious to one with ordinary skill in the art at the time of the invention to have the slot in the cover layer and the dielectric layer be open to the terminal end of the support because the electrode strip of Hughes '823 is designed to receive sample vertically at the top of the strip, not horizontally at the end of the strip. As seen from Figures 5A and 5B; col. 7:6-11; and col. 2:18-32 the slot in the cover layer and the slot in the dielectric layer are configured for a particular top-to-bottom sample flow path.

Carter et al. '890 also does not have the slot in the cover layer or the dielectric layer open to the terminal end of the support. Sample is received vertically through the cover layer and percolates downward to the electrodes. Figures 1 and 1a and col. 6:54-65; and

- b) Claims 2-10 depend directly or indirectly from allowable claim 1.
- 8. Any inquiry concerning this communication or earlier communications from the examiner should be directed to ALEX NOGUEROLA whose telephone number is (571) 272-1343. The examiner can normally be reached on M-F 8:30 5:00.

Art Unit: 1753

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, NAM NGUYEN can be reached on (571) 272-1342. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
